

PALM BEACH COUNTY TRAFFIC DIVISION HISTORIC TRAFFIC GROWTH TABLE

CURRENT YEAR – 2006 *(For use after July 1, 2006)*

This document was developed as supporting information to be used in connection with Article 12 of the Unified Land Development Code, the Traffic Performance Standards. This table shows historical peak season daily traffic counts from 2001 to 2006 as well as a calculated growth rate for each count station. Note that technical and equipment difficulties invalidated the 2002 count data. The volumes shown for 2002 have been calculated as the average of the 2001 and 2003 counts. A 3-year timeframe was used to calculate the growth rate shown. Growth rates have not been tabulated based on peak hour volumes because it is generally understood that daily trends are more appropriate for forecasting. However, it is acknowledged that Article 12 of the ULDC allows for the consideration of peak hour growth rates. The use of peak hour growth rates in a traffic impact study will be considered on a case-by-case basis.

For the purposes of this report, the default time frame should be 2003 – 2006. Where a growth trend other than a compounded rate appears to be appropriate for a given count station, this may be proposed and will be considered for use in a traffic study on a case-by-case basis.

Engineering judgment should be exercised in the use of the growth rates presented, particularly in the following cases:

1. Where negative growth rates were caused by opening parallel road facilities, construction activity, or other extraordinary circumstances.
2. Where extraordinarily high growth rates resulted from new road improvements, opening of a high traffic generator (e.g. a regional mall), or a low initial count.
3. For projects with a lengthy build out time (5 years or more), an area-wide growth rate may be considered per Article 12 of the ULDC.
