Agenda Item #: 31-4

PALM BEACH COUNTY **BOARD OF COUNTY COMMISSIONERS**

AGENDA ITEM SUMMARY

Meeting Date: Department	October 16, 2007	(X) Consent() Ordinance	() Regular() Public Hearing
Submitted By Submitted Fo		Resources Management Resources Management	

I. EXECUTIVE BRIEF

Motion and Title: Staff recommends motion to adopt: a Resolution requesting that the Florida Department of Environmental Protection (FDEP) review a funding application and support funding for shoreline protection projects within its Fiscal Year 2008/2009 Beach Erosion Control Assistance Program.

Summary: The County is requesting that the State appropriate \$28,875 for the Ocean Ridge Shore Protection Project, \$75,000 for the Juno Beach Shore Protection Project, \$362,500 for the South Palm Beach Shore Protection Project, \$5,867,200 for the Singer Island Shore Protection Project, \$203,500 for the Jupiter/Carlin Shore Protection Project, \$681,000 for the South Lake Worth Inlet Management Plan, and \$80,718 for all permit-required monitoring associated with eligible projects. If the State Legislature approves funding for the projects, the County's matching share would be \$10,768,953. Districts 1.4 (SF)

Background and Justification: The FDEP is accepting project funding applications for FY 2008/2009. If the projects are found to be eligible, the FDEP will include them as part of its submittal to the Governor and Cabinet for approval and then forward it as part of the FDEP's Fixed Capital Outlay Budget Request to the State Legislature.

# ADDITIONAL FTE					
POSITIONS (Cumulative)	<u> </u>				
Is Item Included in Curren	t Budget?	Yes	No		
Budget Account No.:	Fund	Department –	Unit	Object	

Program

В. **Recommended Sources of Funds/Summary of Fiscal Impact**

There is no fiscal impact until State funding is appropriated and a project agreement is executed. Potential fiscal impact to the County is \$10,768,953. The State and Federal share of each project's costs would be allocated to the County on a reimbursement basis. If State funds were to be appropriated for the projects and County funding is found to be insufficient to match the State-funded project, other funding sources could be considered, such as short-term borrowing, securing bonds, or delaying the design and construction of other projects already funded. County funding for match will come from the Beach Improvement Fund, if available.

A RESOLUTION OF THE BOARD OF COUNTY COMMISSIONERS OF PALM BEACH COUNTY, FLORIDA, REQUESTING THE STATE OF FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION TO SUPPORT APPROPRIATION OF FUNDS WITHIN THE BEACH EROSION CONTROL ASSISTANCE PROGRAM FOR FISCAL YEAR 2008-09.

WHEREAS, the Board of County Commissioners of Palm Beach County, Florida, is committed to a program of coastal restoration and preservation; and

WHEREAS, Palm Beach County wishes to effectively address beach erosion by construction of shore protection projects and restoration of its dunes; and

WHEREAS, Palm Beach County has a need to perform engineering design,
environmental studies and monitoring of shore protection projects; and

WHEREAS, Palm Beach County has developed and funded a Shore Protection
Program to act as the local sponsor for coastal projects; and

WHEREAS, the projects listed below are consistent with the coastal element of the
Palm Beach County's Comprehensive Plan; and

WHEREAS, the Bureau of Beaches and Coastal Systems is preparing their Beach
Erosion Control Long-Range Budget Plan to develop the Fiscal Year 2008-09 prioritized list
of beach erosion control projects; and

WHEREAS, the public work projects listed below are eligible within the State of Florida's Beach Erosion Control Assistance Program under the provisions of Section 161.101, Florida Statutes

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF COUNTY
COMMISSIONERS OF PALM BEACH COUNTY, FLORIDA, THAT:

Section 1: Palm Beach County is requesting that the State appropriate \$28,875 for the Ocean Ridge Shore Protection Project, \$75,000 for the Juno Beach Shore Protection Project, \$362,500 for the South Palm Beach Shore Protection Project, \$5,867,200 for the Singer Island Shore Protection Project, \$203,500 for the Jupiter/Carlin Shore Protection Project, \$681,000 for implementation of the South Lake Worth Inlet Management Plan, and \$80,718 for all permit-required monitoring associated with eligible projects.

1

Section 2:

2	The foregoing Resolution was offered by Commissioner, who
3	moved its adoption. The motion was seconded by Commissioner,
4	and upon being put to a vote, the vote was as follows:
5	Commissioner Addie L. Greene, Chairperson
6	Commissioner John F. Koons, Vice Chair
7	Commissioner Karen T. Marcus
8	Commissioner Robert J. Kanjian
9	Commissioner Mary McCarty
10	Commissioner Burt Aaronson
11	Commissioner Jess R. Santamaria
12	The Chairperson thereupon declared the Resolution duly passed and adopted this
13	day of, 20
14

JUPITER/CARLIN SHORE PROTECTION PROJECT

Project Description

Shoreline protection for 1.08 miles of beach adjacent to the Jupiter Inlet in Palm Beach County. The beach was first nourished in 1995 and renourished in 2002. A primary dune was reestablished along the project area. Permit-required monitoring is ongoing. A second renourishment is planned for winter 2009/2010. Erosion Control Structures are planned to address an erosive "hot spot" in the northern end of the project.

Location

Between DEP range monuments R13.5 and R19 in Palm Beach County (location map attached).

Project Evaluation

<u>Severity of Erosion</u> Over 30% of the project area includes habitable structures, including one hotel and one condominium. Another 65% of the project area is developed public park area. There is currently no shoreline armoring present in the project area.

The historic erosion rate along the project shoreline was computed to be 1.9 ft/yr (Aug 1996 GDM). However, subsequent studies, which take into effect the periodic influx of sand from inlet bypassing and ICWW dredging projects calculated the actual background erosion rate to be much higher 7.4 cy/ft/yr (approximately 41,000 cy/yr in the project area) (Taylor Engineering, Jupiter Carlin Shore Protection 24-month monitoring report, August 2006)

Most recently, the northern end of the project (R13 - R17) has experienced severe erosion including the total loss of berm and dune in some areas. Wind driven waves associated with sub-tropical Storm Andrea (May, 2007) eroded the beach and destroyed a parks maintenance structure in Jupiter Beach Park. Emergency permits were issued (PB-899 E M1) and approximately 25,000 yd³ of beach-quality fill will be used to reconstruct the dune throughout the area after November 1, 2007. This emergency fill was included for funding under DEP agreement 07PB2.

<u>Benefits:</u> The project is designed to provide long-term storm protection, retain sand within the coastal system, aesthetically enhance the area, and provide habitat for endangered plant and animal species. The beach is publicly accessible in an area heavily utilized by both the local population and visitors. Approximately 70% of the project area lies within two county parks. The Jupiter Beach Resort, with 159 guest rooms, fronts 8% of the project length. Hurricane evacuation routes in the project area include Route A1A which runs N-S along the entire project area and is less than 20' from the dune crest in some sections, and Indiantown Road running E-W and centrally located within the project area. Threatened and endangered marine turtles utilize the entire project area for nesting, however this beach is not a designated marine turtle refuge. The dune in Carlin Park provides habitat for one of the few remaining colonies of endangered Beach Jacquemontia (*Jacquemontia reclinata*) in Palm Beach County. The attached map identifies public beach access points with associated parking spaces, as well as the location of the Beach Jacquemontia colony; also attached is a table of historic sea turtle nesting throughout the project area.

<u>Federal Funding</u>: The project was authorized in 1962, WRDA 1986 & WRDA 1996. A PCA for nourishment was signed on March 15, 1995. The project currently has a Federal cost share of 54%. The sponsor is seeking approval for federal participation in design & construction of the next scheduled renourishment (currently winter 2009/2010). There is currently no Federal participation for the planned erosion control structures in this area.

<u>State Commitment:</u> Both phases of the project and the emergency dune restoration were funded by the state. The project is recommended in the Department's Strategic Beach Management Plan and is located in an area designated as critically eroded in this Plan. This project has been determined to be 100% eligible for State funding.

Local Commitment & Capability: The project is consistent with the local government comprehensive plan and the local sponsor supports the Department's beach management activities as set forth under Part 1, Chapter 161, Florida Statutes. A long-range budget plan and dedicated funding sources are in place. The degree of local funding proposed is detailed in the attached financial schedule. Palm Beach County will use staff for project management of all phases of beach work, including emergency dune replenishment, the second beach renourishment, and the erosion control structures. The County has retained the services of a professional coastal engineering firm to assist in feasibility, design, permitting, and other project related activities. The administrative capability of the local sponsor has been demonstrated by the successful completion of the initial phase of this project as well as many others.

Project Performance: The original project design was based on the GDM & EIS. The project provides for greater than 15 year return interval storm protection. The dune within the project limits is stabilized with vegetation and walkovers and provides enhanced shore protection consistent with the natural system. The extreme north end of the project (R-13 through R-15) experienced a near total loss of berm and dune in May 2007 due to wind and waves associated with Sub-Tropical Storm Andrea. Portions of this beach have not recovered fully from the hurricanes of 2004 and 2005 (Taylor Engineering, Jupiter Carlin Shore Protection 24-month monitoring report, August 2006), and additional solutions are being sought for this beach. The emergency dune project will provide immediate protection to upland structures and habitat and a feasibility study is underway to address the erosional hot spot in the north end of the project area.

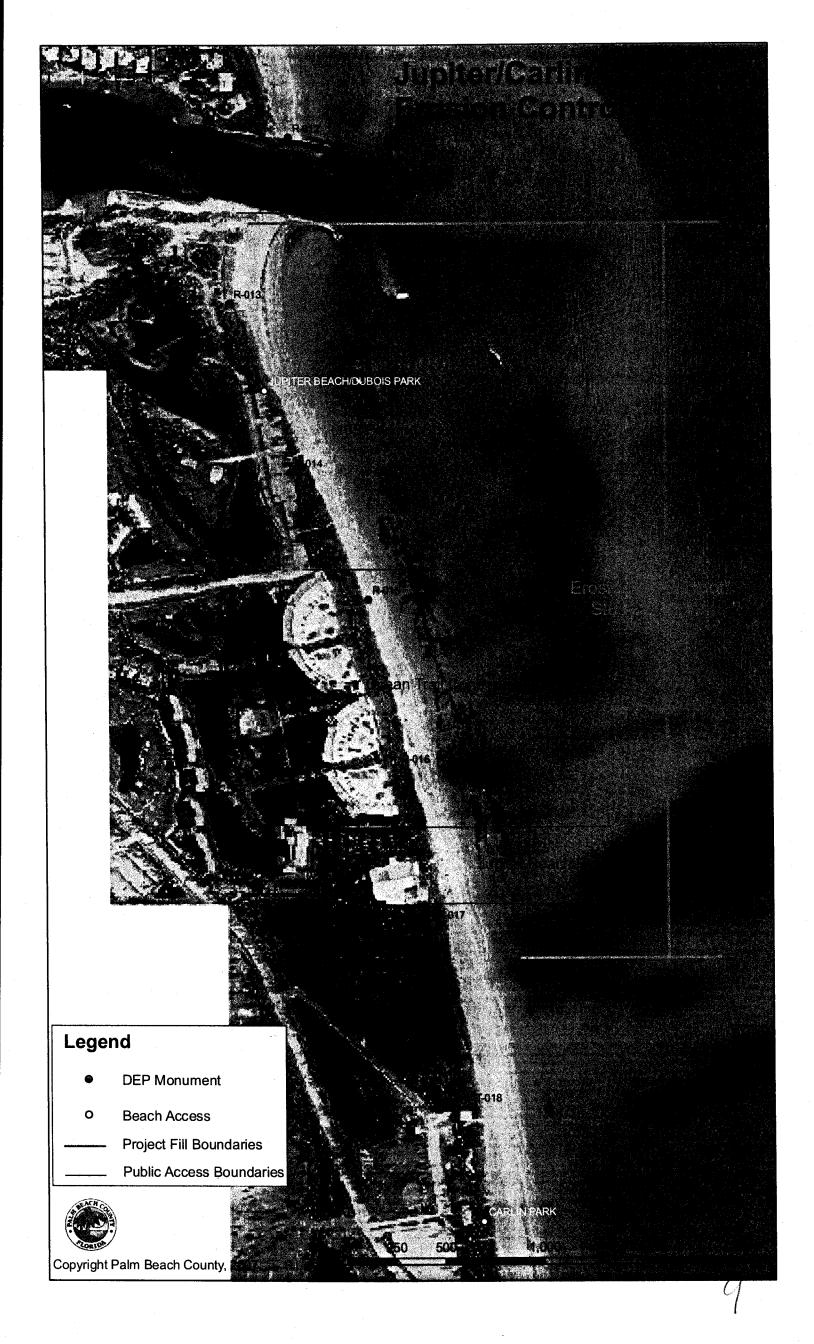

<u>Innovative Applications</u>: The planned structures will provide options to extend the required nourishment intervals. Extending the nourishment interval will minimize the environmental impacts from maintaining the beach, especially in an area of high sea turtle nesting densities. The use of structures in this area will also reduce impact to nearshore reefs which exist within the vicinity of the project.

Use of Program Funds

The requested funding for FY 2008-9 for this area will be used for the pre-construction environmental monitoring, feasibility study, and construction of structures for this area. Funding is also sought for the design and permitting of the next scheduled renourishment (currently winter 2009/2010).

Funding for the design/permitting of structures was authorized in the 2006/2007 funding cycle. Additional study is necessary to account for the severe erosion this area is experiencing. Aerial surveys and regional (profiles and hydrographic) monitoring will be funded through the Countywide Monitoring Agreement (#06PB3).

JUNO BEACH SHORE PROTECTION PROJECT

Project Description

Renourishment of approximately 2.4 miles of critically eroding shoreline beginning 2.2 miles downdrift of Jupiter Inlet. The original project was completed in 2001 and impacted by the hurricanes of 2004 and 2005.

Location

Palm Beach County, R-26 - R-38 (fill area), map attached.

Project Evaluation

<u>Severity of Erosion</u>: The area is designated critically eroded by the Florida State Department of Environmental Protection. The hurricanes of 2004 caused the loss of 251,000 cubic yards of material from the beach profile. Between 1990 and 1996, the beach and dune system out to -18 ft NGVD eroded 860,000 yds³, which is equivalent to an average erosion rate of -9.3 yds³/ft/yr.

<u>Benefits</u>: The project is designed to provide long-term storm protection, retain sand within the coastal system, aesthetically enhance the area, and provide habitat for endangered plant and animal species. A total of 100% of the shoreline is available for public recreational use. Approximately 60% of the project area (7,820 ft) is publicly owned land, parks, and public beach access ways (Diamondhead/Radnor, Ocean Cay, Juno Beach Park, Juno Dunes, and Loggerhead Park). Juno Beach is one of the highest nesting density beaches for threatened and endangered sea turtles in the United States. Shorebirds (including piping plovers) utilize this beach extensively for foraging purposes and a pair of nesting killdeer has fledged chicks on this beach each summer since 2005.

A total of 100% of the project area consists of either habitable dwellings or hurricane evacuation routes. Shoreline development within the area of fill (R-26 through R-38) is approximately 40 % (5,250 ft) multifamily/ commercial structures. Hurricane evacuation routes in the project area include Route A1A which runs N-S along the entire project area and is less than 20' from the dune crest in some sections, and Donald Ross Road running E-W and centrally located within the project area.

The attached map identifies public beach access points with associated parking spaces; also attached is a table of historic sea turtle nesting throughout the project area.

<u>Federal Funding:</u> The Juno Beach project has not been federally authorized, however a one-time allotment of \$1.9 million has been awarded to repair damages to the beach as a result of the 2004 hurricanes. This money, authorized by FEMA, will be used towards design and construction costs of the renourishment currently scheduled to begin construction in the fall of 2008.

<u>Local Commitment</u>: The project is consistent with the local government comprehensive plan and the local sponsor supports the Department's beach management activities as set forth under Part 1, Chapter 161, Florida Statutes. A long-range budget plan and dedicated funding sources are in place. The degree of local funding proposed is detailed in the attached financial schedule. Palm Beach County will use staff for project management of all phases of beach work and required monitoring. The County has retained the services of a professional coastal engineering firm to assist in feasibility, design, permitting, and other project related activities. The administrative capability of the local sponsor has been demonstrated by the successful completion of the initial phase of this project as well as many others.

<u>State Commitment</u>: The project is recommended in the Department's Strategic Beach Management Plan and is located in an area designated as critically eroded in this Plan. This project has been determined to be 100% eligible for State funding.

The original grant for this project (98PB2) expired on September 30, 2006. Additional funds for this project were awarded in the 2007/2008 funding cycle.

<u>Performance of the Project</u>: The project design was based on the GDM & EIS and provides for greater than 15 year return interval storm protection. The dune within the project limits is stabilized with vegetation and walkovers and provides enhanced shore protection consistent with the natural system. Hot spot erosion areas at R-26 through R-29 and R-30 through R-33 are included in the area of fill. The project area is 2.2 miles downdrift of Jupiter Inlet. Jupiter Inlet is estimated to have a volumetric impact on downdrift beaches of 1.65 million cy/yr (Bodge, 1994) and, based on beach profile surveys, this volume of cumulative total sediment loss affects the Juno Beach project area and well south of it as specified in the 1998 Feasibility Study. The fill is expected to provide 100% of the sand needed to maintain the downdrift beaches without impacting the local nearshore habitat.

15

<u>Use of Innovative Technology</u>: The original project was constructed using conventional beach fill methods and design. It is anticipated that the upcoming renourishment will utilize similar technology; however, the County continues to work with the DEP to modify the fill profile design with the intent of reducing the impact of this renourishment event on sea turtle nesting. It is the County's opinion that size of the fill and comparison areas and the fact that detailed sea turtle nesting and reproductive data is available for the past 10 years make this fill project the ideal location for an experimental fill template design.

Use of Program Funds

Funds requested for FY2008-9 will be used to support project-specific monitoring required by permit (currently sea turtle, shorebird, and nearshore reef). Aerial surveys and regional (profiles and hydrographic) monitoring will be funded through the Countywide Monitoring Agreement (#06PB3).

SINGER ISLAND SHORE PROTECTION PROJECT

Project Description

This project consists of design, permitting, construction, and monitoring associated with the restoration of 1.8 miles of coastline on Singer Island. The restored dune will reduce the impact of storms, add a reservoir of sand and help dissipate wave energy. Structures will be used to stabilize the beach.

Location

Palm Beach County, R-60.5 to R-69 (See attached location map.)

Project Evaluation

Severity of Erosion: Rapid fluctuations in shoreline position threaten developed property along 76% of the project area. The project area is located within an area of critical erosion as designated by the Department; since 2001, erosion rates have been calculated up to -15 ft/yr. Recent hurricanes and storm activity have accelerated the beach erosion throughout the area. Dune restoration and plantings have been necessary each year to protect upland properties since 2004. The hurricanes of 2004 and 2005 destroyed the restored dunes and lowered the berm height. The beach has not recovered, and continues to be impacted by wind and waves due to winter storms and tropical activity, most recently Sub-Tropical Storm Andrea.

<u>Benefits</u>: Shoreline development within the project area consists of multifamily/hotel structures and public park land, 80% of which lies within ½ mile of the Riviera Beach Municipal Park, Ocean Reef Park or MacArthur State Park. Public beach access, as shown on the attached map, allows for public and tourism use throughout the project area. Hurricane evacuation routes in the project area include Route A1A which runs N-S along the entire project area.

Threatened and endangered marine turtles utilize the entire project area for nesting purposes and protected plant species are located in the dunes.

<u>State Commitment:</u> The feasibility studies for the project were funded by the state (01PB1) and the project is included in the Strategic Beach Management Plan. The initial phase of dune restoration was funded by the state (01PB1), as were subsequent restorations (H5PB1) and design and initial permitting of erosion control structures (05PB2 and 06PB2). Most recently, this area was included under emergency funding grant 07PB2 for dune restoration.

Local Commitment & Capability: The project is consistent with the local government comprehensive plan and the local sponsor supports the Department's beach management activities as set forth under Part 1, Chapter 161, Florida Statutes. A long-range budget plan and dedicated funding sources are in place. Funds for the local share of the project costs are budgeted through tourism bed tax and ad valorem funding. The degree of local funding proposed is detailed in the attached financial schedule. Palm Beach County will use staff for project management of all phases of beach work, including dune replenishment and the erosion control structures. The County has retained the services of a professional coastal engineering firm to assist in feasibility, design, permitting, and other project related activities. The administrative capability of the local sponsor has been demonstrated by the successful completion of the initial phase of this project as well as many others.

<u>Project Performance</u>: The project design is based on an updated feasibility study. The project is designed to enhance shore protection by the restoration of the native dunes and stabilization of the berm in an area where extensive near shore environmental resources would be impacted by beach nourishment. The structures will provide long term stabilization (>25 years) to the project area. The dune component of the project utilizes local sand resources to minimize cost. The proposed structures are based on the least-cost alternative suggested in the feasibility study and are designed to provide long-term stability.

<u>Innovative Applications</u>: The structural components are based on the use of innovative modeling technology to minimize the extent of construction necessary for shoreline stabilization. The combination of dune restoration and structural stabilization instead of conventional beach nourishment minimizes the

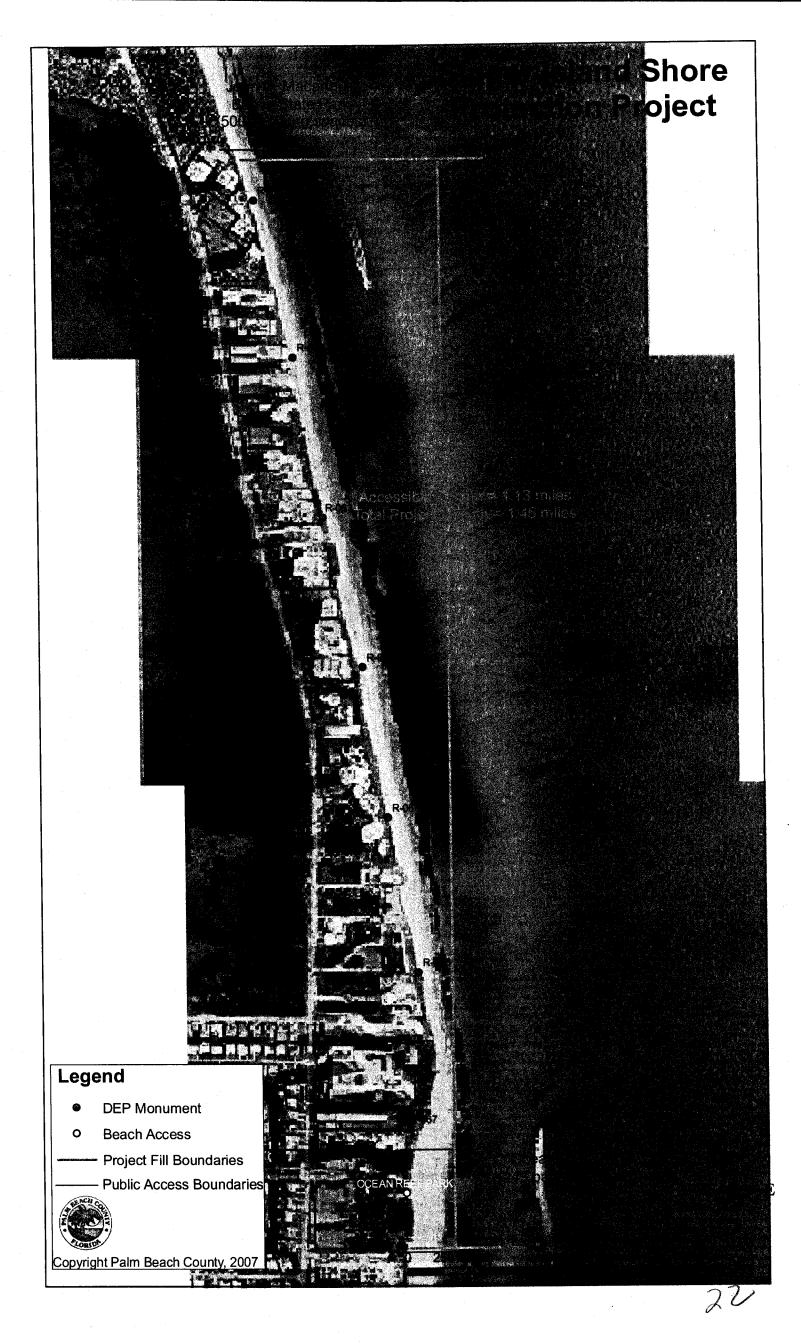

Page 2 of 2

Singer Island Shore Protection Project potential impacts to nearshore hardbottom

Use of Program Funds

The requested funding for FY 2008-9 for this area will be used for the pre-construction environmental monitoring and construction of structures for this area. The requested funding will be used supplement monies already appropriated for construction of the erosion control structures, as construction estimates have shown that actual costs will likely be much higher than anticipated. Project specific environmental monitoring to be funded includes sea turtle nesting and reproductive success, shorebird populations, and near shore reef monitoring. Aerial surveys and regional (profiles and hydrographic) monitoring will be funded through the Countywide Monitoring Agreement (#06PB3).

SOUTH PALM BEACH SHORE PROTECTION PROJECT

Project Description

Restoration of approximately 0.7 miles of critically eroding shoreline along the entire length of the municipality and the public beach in Lantana. A feasibility study for the project is complete and an Environmental Impact Statement for the project is underway. Persistent dunes within the project area are restored on an as-needed basis, most recently in response to near total loss of dune resulting from sub-tropical Storm Andrea (May 2007). Sand lost from the berm during the 2004 and 2005 hurricanes has not been restored however; staff works to maintain the current level of the beach with dune stabilizing plantings.

Location

Palm Beach County, R-134 - R-137.5 (fill area), map attached.

Project Evaluation

<u>Severity of Erosion</u>: The area is designated critically eroded by the Florida State Department of Environmental Protection. The hurricanes of 2004 and 2005 destroyed the restored dunes and lowered the berm height. The beach has not recovered, and continues to be impacted by wind and waves due to winter storms and tropical activity.

<u>Benefits</u>: The project is designed to provide long-term storm protection, retain sand within the coastal system, aesthetically enhance the area, and provide habitat for endangered plant and animal species. A total of 96% of the project area shoreline is available for public recreational use (within ¹/₂ mile of Lantana Public Beach). Approximately 22% of the project area is publicly owned parks and beach access ways. A total of 78% of the project area consists of a hotel and multifamily structures. Hurricane evacuation routes in the project area include Route A1A which runs N-S along the entire project area.

Threatened and endangered marine turtles utilize the entire project area for nesting purposes and protected plant species are located in the dunes.

<u>State Commitment</u>: Grant funding was provided for the dune work and feasibility study. The project is included in the Florida DEP Beach Restoration Management Plan. Funding provided in the 2006/2007 fiscal year has been exhausted on the feasibility study and dune fill projects. Most recently, this area was included under emergency funding grant 07PB2 for dune restoration.

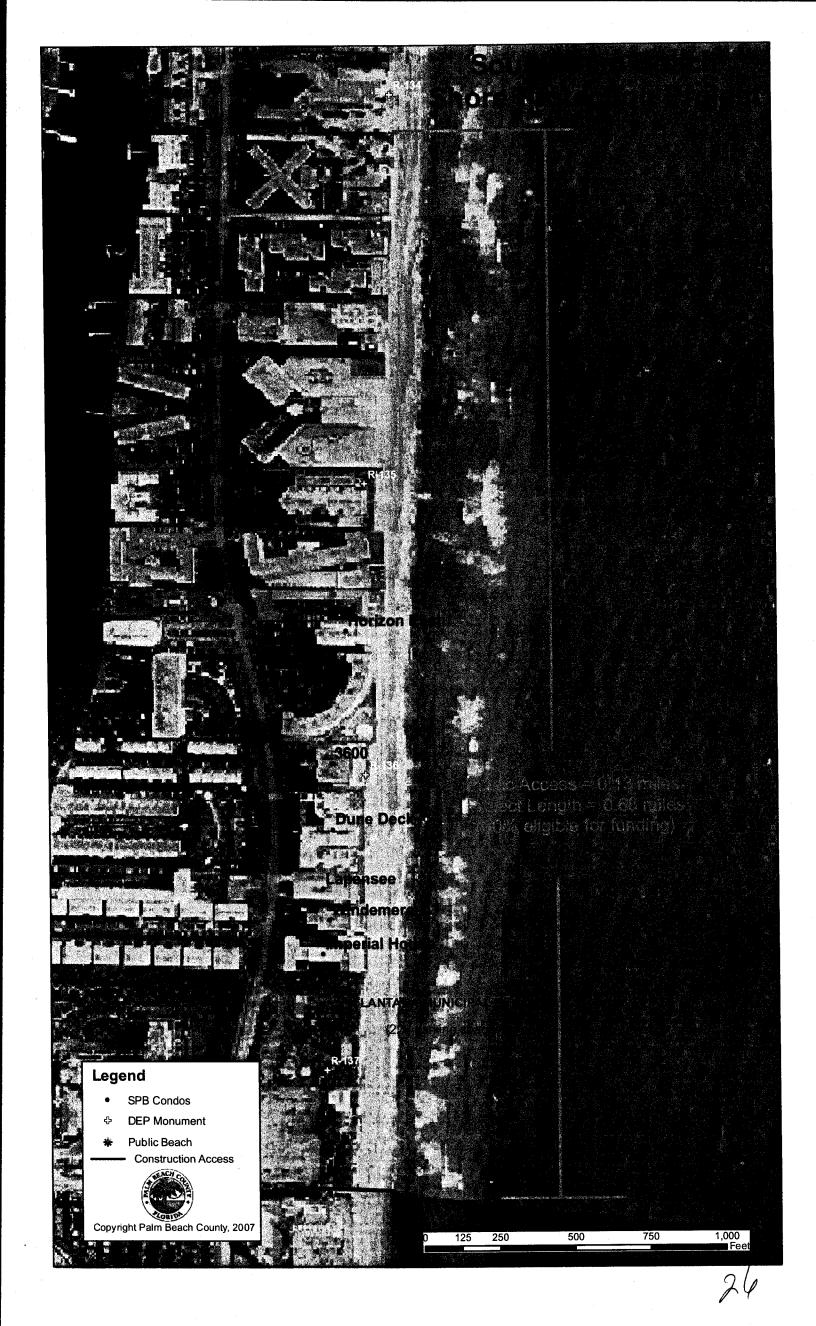

Local Commitment: The project is consistent with the local government comprehensive plan and the local sponsor supports the Department's beach management activities as set forth under Part 1, Chapter 161, Florida Statutes. A long-range budget plan and dedicated funding sources are in place. The degree of local funding proposed is detailed in the attached financial schedule. Most recently, an interlocal agreement has been signed by the Town of South Palm Beach to provide a share of the local cost for the design, permitting, and construction of erosion control structures. The administrative capability of the local sponsor has been demonstrated by the successful completion of the initial phase of this project as well as many others. County staff will provide administrative, contract development, legal, permitting, environmental monitoring and construction management services.

<u>Innovative Applications</u>: Innovative modeling technology is being used to minimize the extent of construction necessary for shoreline stabilization. Preliminary results show that a combination of dune restoration and structural stabilization instead of conventional beach nourishment will minimize the potential impacts to extensive nearshore hardbottom resources in the vicinity.

Use of Program Funds

Funds requested for FY 2008-9 will be used to support project design and permitting as well as preconstruction environmental and biological monitoring. Aerial surveys and regional (profiles and hydrographic) monitoring will be funded through the Countywide Monitoring Agreement (#06PB3).

SOUTH LAKE WORTH INLET MANAGEMENT

Project Description

The project consists of design, permitting, construction, and monitoring associated with the implementation of the South Lake Worth Inlet Management Plan. Activities occurring under this project include the periodic dredging of the sand trap and navigational channel located inside the inlet and the reconstruction of the sand transfer plant.

Location

Palm Beach County, R-152 (monitoring from R137-R164)

Project Evaluation

<u>Severity of Erosion</u>: Interruption of the natural sand transport threatens developed property along 77% of the project area. The historic erosion rate along the project shoreline was computed to be five cy/yr/lf (Aug 1996 GDM). Over the anticipated six year renourishment schedule, the erosion rate is anticipated to average 7.44 cy/yr/lf (including end losses).

This area is located within an area of critical erosion as designated by the Department.

Benefits:

Shoreline development within the project area consists of developed property and public park land, 100% of which lies within ½ mile of adequate public access facilities. Public beach access allows for public and tourism use throughout the project area. Threatened and endangered marine turtles utilize the entire project area for nesting purposes and protected plant species are located in the dunes.

<u>Federal Commitment</u>: This project has not been federally authorized, however a one-time allotment has been awarded to repair damages to the sand transfer plant and to the inlet jetty as a result of the 2004 hurricanes. This money, authorized by FEMA, will be used to offset construction costs.

<u>State Commitment:</u> The management plan for the project and annual monitoring was funded by the state and the project is included in the Strategic Beach Management Plan. The initial phase of sand trap development & restoration of the sand transfer plant was funded by the state. The funding appropriation for the SLWI jetty restoration was confirmed by the legislature on July 17, 2007. The original grant for this project (99PB1) has been extended several times and expires on February 28, 2008.

Local Commitment & Capability: The project is consistent with the local government comprehensive plan and the local sponsor supports the Department's beach management activities as set forth under Part 1, Chapter 161, Florida Statutes. A long-range budget plan and dedicated funding sources are in place. The degree of local funding proposed is detailed in the attached financial schedule. The County has retained the services of a professional coastal engineering firm to assist in feasibility, design, permitting, and other project related activities. The administrative capability of the local sponsor has been demonstrated by the successful completion of the initial phase of this project as well as many others.

<u>Project Performance</u>: The project mitigates for adverse impacts associated with the inlet, providing 100% of the bypass quantity required by the approved management plan. The project area acts as a feeder beach to maintain down drift areas which contain nearshore hardbottom habitat. The transfer plant continues to provide a cost effective and environmentally sound method of bypassing sand over an extended time period. The latest data show the sand transfer plant bypasses approximately 60,000 CY annually to down drift beaches. Sand trap and navigational channel dredging maximize the use of sediment sources in maintaining the beach. The performance of sand bypass into the groin field is such that the area maintained its width throughout the project interval and did not require any fill during the most recent downdrift beach nourishment (Ocean Ridge shore protection project, completed Dec 2005), resulting in a cost savings through the reduction in the amount of fill necessary.

<u>Innovative Applications</u>: The plant is a component of an innovative approach to maintain the downdrift beaches using inlet sand bypass discharge into a groin field. The bypassed sand is native beach material, with color, fine fraction and compaction characteristics which has been shown to not impact sea turtle nesting success. The steady rate of transfer eliminates the need for advanced fill and the related impacts to nearshore hardbottom.

South Lake Worth Inlet Management

Page 2 of 2

Use of Program Funds

The requested funding will be used for design, permitting, construction, and monitoring associated with the implementation of the South Lake Worth Inlet Management Plan. Additional funds for construction are needed to rebuild the existing sand transfer plant. Construction of the new plant has been combined with the Inlet jetty repair and the construction of the Bird Island Bulkhead, and will be bid out as one project. Construction is scheduled to begin in the spring of 2008.

Attachments: MPP timeline (see Ocean Ridge attachment for map of project area)

OCEAN RIDGE SHORE PROTECTION PROJECT

Project Description

Shoreline protection and monitoring of 1.42 miles of beach adjacent to the South Lake Worth Inlet in Palm Beach County. The beach was first nourished in 1998. A series of eight T- head groins was also constructed and a primary dune was reestablished along a majority of the project area. In November of 2005, 1.1 miles of this beach was renourished.

Location

Between DEP reference monuments R-151 and R-159 in Palm Beach County (location map attached).

Project Evaluation

<u>Severity of Erosion</u>: The historic erosion rate along the project shoreline was computed to be five cy/yr/lf (Aug 1996 GDM). Over the anticipated six year renourishment schedule, the erosion rate is anticipated to average 7.44 cy/yr/lf (including end losses).

<u>Benefits</u>: The beach is publicly accessible in an area heavily utilized by both the local population and visitors. Approximately 40% of the project area lies within two county parks and one municipal park. Studies included in the GDM estimated beach usage in 2010 to be over 665,000 visits/year. The project is designed to provide long-term storm protection, retain sand within the coastal system, aesthetically enhance the area, and provide habitat for endangered plant and animal species. Hurricane evacuation routes in the project area include Route A1A which runs N-S along the entire project area.

Threatened and endangered marine turtles utilize the entire project area for nesting purposes and protected plant species are located in the dunes.

<u>Federal Funding</u>: The project was authorized on October 23, 1962 (87-874) & WRDA 1996. The original PCA was signed on March 15, 1999, and updated and signed on February 15, 2005. The 2005 renourishment was completed as part of the US Army Corps of Engineers regional hurricane remediation efforts. This project currently has a federal funding cost share of 53.8%.

<u>State Commitment:</u> The design & construction of both nourishment projects were funded by the state. The project is recommended in the Department's Strategic Beach Management Plan and is located in an area designated as critically eroded in this Plan. This project has been determined to be 100% eligible for State funding.

The original grant for this project (06PB1) expires on October 1, 2007. Additional funds for mitigation of this project were awarded in the 2007/2008 funding cycle.

Local Commitment & Capability: The project is consistent with the local government comprehensive plan and the local sponsor supports the Department's beach management activities as set forth under Part 1, Chapter 161, Florida Statutes. A long-range budget plan and dedicated funding sources are in place. The degree of local funding proposed is detailed in the attached financial schedule. The County has retained the services of a professional coastal engineering firm to assist in post construction project performance (profiles and hydrographic) and near shore reef monitoring. County staff will continue to perform permitrequired sea turtle, shorebird and scarp monitoring. County staff time for this monitoring has been authorized as eligible for state cost share as per Feb 15, 2006 letter to Michael Barnett. The administrative capability of the local sponsor has been demonstrated by the successful completion of the initial phase of this project as well as many others.

<u>Project Performance</u>: The project design was based on the GDM (NED included) & EIS. It has performed as designed and is optimized with the addition of sand dredged from the ICW, the inlet sand trap, the boat club channel and the sand bypass plant. The project mitigates for adverse impacts of the inlet by providing 100% of the bypass quantity proposed in the inlet management plan. The fill provides 100% of the sand needed to maintain the downdrift beaches in Gulfstream without impacting the local nearshore habitat. The project is designed to improve cost effectiveness by using groins, a bypass plant, and spoil from periodic dredging of areas within Lake Worth.

<u>Innovative Applications</u>: The project demonstrates the combined successful use of periodic nourishment, groins and a sand transfer plant.

Page 2 of 2

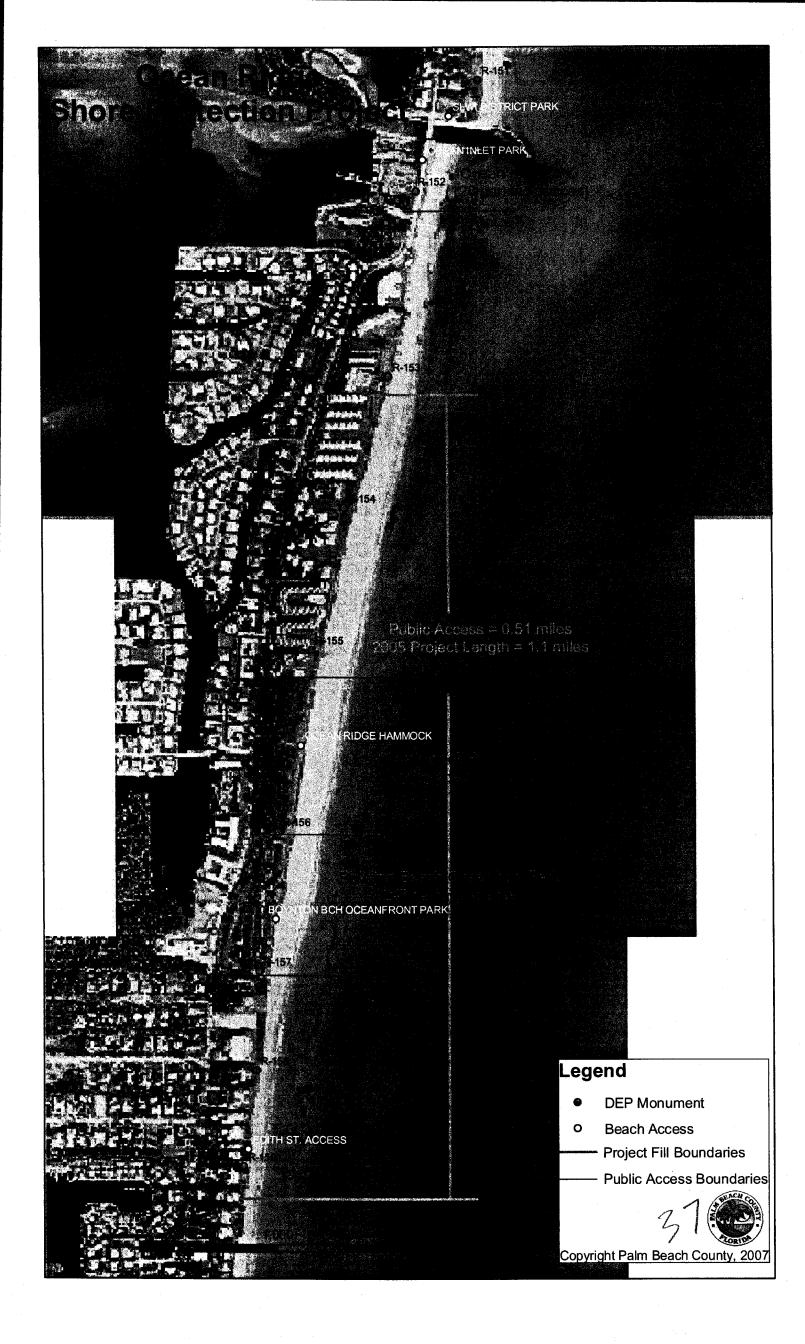

Ocean Ridge Shore Protection

Use of Program Funds

The requested funding will be used for project-specific monitoring required by DEP permit (currently sea turtle, shorebird, and near shore reef). Aerial surveys and regional (profiles and hydrographic) monitoring will be funded through the Countywide Monitoring Agreement (#06PB3).

Attachments: Project map, table of sea turtle nesting activity

PALM BEACH COUNTYWIDE MONITORING

Project Description

This project consists of regional monitoring activities associated with eligible beach projects.

Location

Palm Beach County, R-001 to R-204 (Excluding all of the Town of Palm Beach). See attached project maps for detailed location information.

Eligible Projects to be Funded

- Ocean Ridge Shore Protection
 - The first renourishment of this project was completed in December of 2005.
 - Permit required post-construction monitoring is ongoing and will continue through 2009.
- Juno Beach Shore Protection Project
 - Design and permitting of this project is ongoing and will be complete by November of 2007.
 - Required pre-construction monitoring will be completed prior to the issuance of a Notice to Proceed for this project.
 - Construction on this project is scheduled to begin in November of 2008 and will be complete before March 1, 2009.
 - Post-construction monitoring will begin upon project completion.
- South Palm Beach Shore Protection Project
 - The feasibility study for this project was completed in December of 2006. The final report is currently under review.
 - o Design and permitting of this project is scheduled to begin in November 2007.
- Singer Island Shore Protection Project
 - Permitting is ongoing and construction of the breakwaters for this project is expected to occur in the 2008/2009 fiscal year
- Jupiter Carlin Shore Protection Project
 - The feasibility study for the proposed structures associated with this project will begin in September 2007.
 - The design and permitting of the second renourishment will begin in 2008.
- South Lake Worth Inlet Management
 - Monitoring associated with the implementation of the South Lake Worth Inlet Management Plan is ongoing.

Use of Program Funds

Activities to be funded under this include monitoring required by permit. Physical monitoring which will be funded under this grant includes, but is not limited to: topographic/bathymetric surveys, and aerial photography. Biological monitoring which includes, but is not limited to: nearshore reefs, shorebird populations, and sea turtle nesting and reproductive success, is project specific and will not be funded under this grant in the 2008-2009 cycle, but under individual project grants.
